

Immune System Market Report

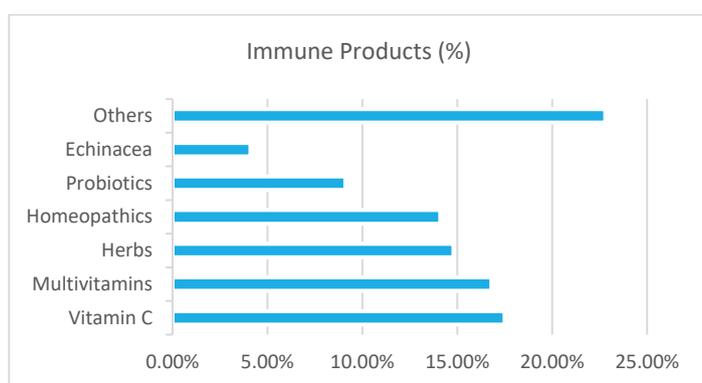

- Ingredients4u, June 2020

News: Immune Health Market Analysis and Trend

20-June, 2020, by Donald Tang

The last good part of this pandemic is that immune support has been pushed to the forefronts of people's mind. A recent research from NBJ has shown that 26% among 1000 US adults has increased their usage of supplement in March compared to February, and 20% of them reported "never" buying these products will start to buy since June.

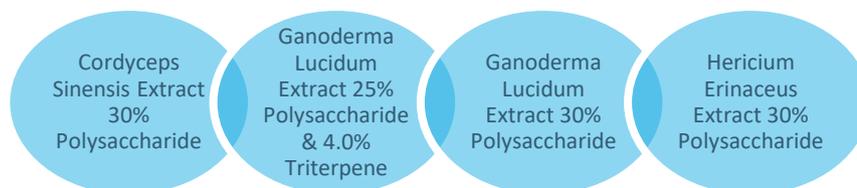

Research shows that consumers are buying everything they can to enhance their immune system, from single herbs like Echinacea to multivitamin, from probiotics to minerals. Such trends have driven the market to introduce more innovative new options for consumers than ever before.

Besides above mentioned products, Ingredients4u also suggests people to consider Polysaccharide series products from different sources.

Polysaccharides has been paid more and more attention and recognized by scientists. Polysaccharides are closely related to the regulation of immune function, the recognition between cells, the transportation of substances between cells, the diagnosis and treatment of cancer. In recent years, it has been found that the sugar chain of polysaccharides plays a decisive role in molecular biology.

In addition, it can control cell division and differentiation, regulate cell growth and aging. In addition, polysaccharides are widely used in food industry, fermentation industry and petroleum industry. Therefore, scientists have done a lot of research and made great progress in the development of polysaccharide resources, the analysis of polysaccharide structure and the research of polysaccharide pharmacological action. In particular, the research on Polysaccharide of edible fungus has been carried out in depth, among which Reishi polysaccharide, Cordyceps polysaccharide, Goji polysaccharide are the most prominent. Their excellent immune function and high safety have been recognized by medical experts all over the world.
